

This is a very short SOP for giving people permission to view the coastal webmap.

1. Log into GCP console
2. Type 'Security' into the search bar on top and select the 'Security' tab
3. On the left panel, scroll down to almost the bottom and click on Identity-Aware Proxy
4. Click on coastal-restoration-map-backend-2
5. In the right pane, click on 'Add principal'
6. Enter the email of whoever you want to add in 'new principal'
7. Give them the 'IAP-secured Web App User' role and press save
8. Repeat steps 5-7 for the 'default' resource. (not sure if this step is necessary)
